

TRIUMF Standard Operating Procedure Project Governance

Thomas Planche
e⁻Linac Facility Coordinator

July 11, 2024

TSOP-15

Our regulator (Canadian Nuclear Safety Commission) requires that TRIUMF management system complies with a specific standard (N286-12).

“Processes by which TRIUMF approves, monitors and administers projects from conception to completion are described in TSOP-15” [TRIUMF Quality Manual].

For transparency: I have posted TSOP-15 on indico.

Our licensed activities must comply with our “Licence Condition Handbook”.

For this it essential that we keep the Safety Reports of each of our facilities up-to-date. Ethan’s work with FLUKA is a crucial part of it.

TRIUMF will update the ARIEL Safety Report, write a specific DarkLight SAR, produce the related commissioning documents, and communicate them to CNSC sufficiently ahead of the first beam tests.

Thank you
Merci
