

- Freeze the analysis note on Jan. 28th (by the next Bulk TG meeting): the only major missing part is the correct factor of the PHOBOS approach, others are plots to be updated
- Centrality for simulation: take much longer than expected. Dennis is informed that PPG needs to ASAP
- Simulation production: Request from Co-SP, PC, Joe, and Chris to have centrally produced simulations. We've sent our simulation package to Chris and Joe, and they should be responsible for run simulation with our unconventional configurations for now on
