## Introduction

- Simulations have been carried out since the last meeting – Jan will report
- We are proposing a program that can begin with 32 MeV electron beam energy:  
Total initial beamtime request: ~1000 hours at 32 MeV, inc. engineering runs
- Additional non-magnetic electron detector looks interesting - feasibility needs to be proven
- Opportunities for new collaborators: scintillators, target, beam diagnostics, vacuum system, background studies,...
- Request that new collaborators join by Thu March 25<sup>th</sup> – please specify area of interest
- Deadline for proposal submission is Monday March 29<sup>th</sup> at midnight PST
- Schedule another collaboration meeting in April before the PP-EEC meeting on Thu April 22<sup>nd</sup>.
